CALIBER

12 Gauge

The ultimate design and features of an **AR semi-automatic shotgun** using a conventional gas-operated action which is located around the support tube that runs below the barrel. The return spring is also located around the same support tube which is concealed by an **enlarged polymer handguard**. The barrel can be very easily removed from the upper receiver. The upper receiver is manufactured from an **aluminum alloy**. The magazine release button mimics the M16 rifle location. The manual safety also duplicates the M16 style being located on the left side of the receiver above the pistol grip. The top of the receiver has a **carrying handle** and **integral picatinny rail** for mounting rear sights, or any optical accessories. The VR60 12 gauge shotgun is appropriate for all levels of hunting and sporting enthusiasts. Comes packaged in a nice commercial box with the chokes and magazine. Removable A-2 style carry handle allows for quick conversion to a flat top. Chambered for **2 3/4" or 3" Magnum loads**.
